

SURIYA PRASATH PARAMESWARAN

DATA ANALYST

Leeds, UK · +44 7887 299164 · suriyavictor6@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

UK work authorisation – no sponsorship required (Graduate Route to Feb 2028)

PROFILE

MSc Data Science and Analytics graduate (University of Leeds) working across the full analytics stack: SQL on multi-table databases, modelling in Python, and Power BI. I turn messy business questions into decisions a team can act on, whether that's a profit-ranked target list, a revenue breakdown, or a board-ready dashboard. Recent work spans bank campaign optimisation, e-commerce revenue analytics, and cybersecurity risk classification.

PROJECTS

Campaign ROI Optimisation — Bank Telemarketing

2025

- Ranked 41,000 Portuguese bank customers by expected profit in SQL, prioritising which prospects to call within a fixed daily capacity.
- Top 1,000 ranked customers converted at 77% vs an 11.3% baseline, a 6.8x lift over random targeting at a fixed daily call capacity. Found macroeconomic factors (employment, interest rates, seasonality) drove conversion more than customer attributes.
- Shipped a 3-page Power BI dashboard where operators set any call capacity and instantly see expected profit, ROI, and the recommended target list.

Tools SQL · DuckDB · Power BI · DAX · Power Query · Python

CVE Severity Intelligence Engine — MSc Dissertation

2025

- Built a model classifying ~29,000 NVD cybersecurity vulnerabilities by severity to help security teams prioritise which issues to fix first.
- Combined TF-IDF + XGBoost with SMOTE against a fine-tuned SecBERT transformer; reached 0.81 F1 on the CRITICAL class and 74% overall accuracy, with explainability surfacing why each item was flagged.
- Shipped the final model as a Streamlit app for end-user review, with MLflow experiment tracking and automated testing.

Tools Python · XGBoost · SecBERT · scikit-learn · Streamlit · MLflow · Git

E-Commerce SQL Intelligence Engine

2025

- Built a full SQL analytics layer over 99K e-commerce orders across 27 Brazilian states, using window functions and CTEs to surface revenue, retention and delivery drivers, then served it through a 3-page Power BI dashboard.
- RFM segmentation showed Champion customers generate 8x the revenue of lost customers, pointing retention spend at the segments that actually move the top line.
- Used cohort analysis to prove late deliveries drop review scores from 4.3 to 2.7 stars, quantifying a direct link between fulfilment performance and customer satisfaction.

Tools PostgreSQL · SQL (window functions, CTEs) · Power BI · DAX · RFM · Cohort Analysis

EXPERIENCE

IoT & Data Analytics Intern · Shree Kay Vee Automation

Jan 2023 — Apr 2023

- Analysed IoT sensor data from manufacturing equipment to identify patterns linked to machine performance and failure risk; built dashboards used by the operations team.
- Improved data quality and reporting reliability through structured preprocessing and validation workflows.

EDUCATION

MSc Data Science and Analytics · University of Leeds

Sep 2024 — Sep 2025

Coursework: Applied Machine Learning, Statistical Learning, Natural Language Processing, Data Mining, Time Series Analysis, Cloud Computing, Big Data Analytics.

BE Mechanical Engineering · Easwari Engineering College, Anna University

Jun 2018 — Mar 2022

SKILLS

Databases & SQL PostgreSQL, MySQL, SQL (joins, CTEs, window functions, aggregations), data cleaning, EDA

BI & Visualisation Power BI, DAX, Power Query, Tableau, Excel (PivotTables, VLOOKUP)

Programming & Tools Python (pandas, NumPy, scikit-learn, matplotlib), R, Git, Jupyter, Streamlit, MLflow

Analytics & Stats A/B testing, customer segmentation (RFM), cohort analysis, hypothesis testing, KPI reporting
