

SURIYA PRASATH PARAMESWARAN

DATA ANALYST

Leeds, UK · +44 7887 299164 · suriyavictor6@gmail.com · LinkedIn · Portfolio

PROFILE

MSc Data Science and Analytics graduate (University of Leeds) working across the full analytics stack: SQL on multi-table databases, Python modelling, and Power BI. I turn messy business questions into decisions a team can act on: profit-ranked target lists, revenue breakdowns, board-ready dashboards. Recent work spans fraud detection, bank campaign optimisation, e-commerce analytics, and cybersecurity risk classification.

EXPERIENCE

Data Analyst | Independent Projects

Oct 2025 - Present

Campaign ROI Optimisation Engine

- ▶ Ranked 41,000 Portuguese bank customers by expected profit in SQL, determining which prospects to call within a fixed daily capacity.
- ▶ Top 1,000 ranked customers converted at 77% vs an 11.3% baseline, a 6.8x lift. Identified macroeconomic factors (employment, interest rates, seasonality) as stronger conversion drivers than customer attributes.
- ▶ Shipped a 3-page Power BI dashboard where operators set any call capacity and instantly see expected profit, ROI, and the recommended target list.

Tools: SQL · DuckDB · Power BI · DAX · Power Query · Python

Fraud Triage Engine

- ▶ Built a production-grade fraud detection system on a highly imbalanced dataset using a calibrated LightGBM/XGBoost ensemble with isotonic calibration and SHAP explainability.
- ▶ Catches 81.3% of fraud cases within a daily review cap of 500, cutting operational cost by 70% vs manual review, deployed end-to-end with FastAPI and Docker.
- ▶ Implemented drift monitoring and automated retraining triggers to maintain model reliability in production.

Tools: Python · LightGBM · XGBoost · SHAP · FastAPI · Docker · scikit-learn · MLflow

IoT & Data Analytics Intern · Shree Kay Vee Automation

Jan 2023 - Apr 2023

- ▶ Preprocessed and cleaned IoT sensor data from manufacturing equipment in Python and SQL, building the ingestion and validation workflows the analysis ran on.
- ▶ Built dashboards used by the operations team to monitor machine performance and surface failure-risk patterns.
- ▶ Supported the engineering team on predictive and anomaly-detection work, contributing data preparation, feature engineering, and model evaluation.

Tools: Python · SQL · scikit-learn · Time Series Analysis · IoT Analytics

PROJECTS

CVE Severity Intelligence Engine (MSc Dissertation, University of Leeds)

- ▶ Built a classifier for ~29,000 NVD cybersecurity vulnerabilities to help security teams prioritise remediation by severity.
- ▶ Fine-tuned a SecBERT transformer against a TF-IDF + XGBoost baseline with SMOTE; achieved 0.81 F1 on the CRITICAL class and 74% overall accuracy, benchmarked against Claude and GPT-4o zero-shot.
- ▶ Delivered as a Streamlit app with SHAP explainability surfacing why each vulnerability was flagged, with MLflow experiment tracking throughout.

Tools: Python · SecBERT · XGBoost · scikit-learn · SHAP · Streamlit · MLflow · Git

E-Commerce SQL Intelligence Engine

- ▶ Built a full SQL analytics layer over 99K e-commerce orders across 27 Brazilian states, using window functions and CTEs to surface revenue, retention, and delivery drivers, served through a 3-page Power BI dashboard.
- ▶ RFM segmentation showed Champion customers generate 8x the revenue of Lost customers, pointing retention spend at the segments that actually move the top line.
- ▶ Cohort analysis proved late deliveries drop review scores from 4.3 to 2.7 stars, quantifying a direct link between fulfilment performance and customer satisfaction.

Tools: PostgreSQL · SQL (window functions, CTEs) · Power BI · DAX · RFM · Cohort Analysis

10+ additional projects across fraud detection, churn modelling, NLP, and financial analytics - view full portfolio

EDUCATION

MSc Data Science and Analytics · University of Leeds

Sep 2024 - Sep 2025

- ▶ Coursework: Applied Machine Learning, Statistical Learning, NLP, Data Mining, Time Series Analysis, Cloud Computing, Big Data Analytics, Business Development.

SKILLS

Databases & SQL: PostgreSQL, MySQL, SQL (joins, CTEs, window functions, aggregations), DuckDB, data cleaning, EDA

BI & Visualisation: Power BI, DAX, Power Query, Tableau, Excel (PivotTables, VLOOKUP)

Programming & Tools: Python (pandas, NumPy, scikit-learn, LightGBM, XGBoost, matplotlib), Git, Docker, FastAPI, Streamlit, MLflow

Analytics & ML: A/B testing, RFM segmentation, cohort analysis, uplift modelling, anomaly detection, hypothesis testing, KPI reporting

Transferable: Pattern recognition, client communication, data storytelling, problem framing, project ownership
